<b>Version</b>	

Northland Power annually assesses its environmental performance and commitments, and reviews the corporate Environmental Policy Statement. This Environmental Policy is communicated to all employees, as our environmental stewardship depends on the participation of each individual.

Northland Power is a leader in the development of environmentally beneficial energy facilities and will continue to promote the clean, efficient generation of electricity. Northland Power is committed to the protection of the environment and the health and well being of its employees and the public.

Northland Power's environmental policy is to:

- responsibly manage all aspects of its operations such that its environmental obligations are achieved;
- design, construct and operate its facilities in compliance with the applicable environmental legislation;
- ensure that all personnel adhere to the established environmental procedures and provide the necessary training and feedback;
- in the absence of legislation, implement cost-effective best management practices to provide environmental protection and minimize risk;
- employ periodic environmental audits and self-monitoring programs to assess compliance with government legislation and regulatory requirements, and to direct the continuous improvement of Northland Power's environmental management system;
- communicate with government agencies and the public on the environmental performance of Northland's facilities;
- select contractors who are committed to compliance with the applicable environmental legislation, communicate this policy to them and to monitor/police their performance.
- support global sustainability efforts and the development of renewable energy infrastructure.

It is the responsibility of each employee to understand and to comply with the governing environmental legislation and this policy.

Mike Crawley  
President and Chief Executive Officer
